## 2024 Adult Preventive Health Guidelines: Ages 19 through 64 Years

The Patient Protection and Affordable Care Act (PPACA, P.L. 111-148, March 23, 2010, as amended) requires, among other things, coverage of all A and B Recommendations as promulgated by the United States Preventive Services Task Force (USPSTF). Recommendations can be found at <a href="https://www.uspreventiveservicestaskforce.org/uspstf/recommendation-topics/uspstf-a-and-b-recommendations">https://www.uspreventiveservicestaskforce.org/uspstf/recommendation-topics/uspstf-a-and-b-recommendations</a>

. History and Physical	Description	References
History and Physical Exam	A physical should be performed every one to two years for adults ages 19-49, and every year for adults ages 50 and older. Female PE: -Discuss preconception guidelines as appropriate -Annual pelvic/breast exam	<ol> <li>USPSTF (1996) Updated 2004</li> <li>The expert consensus opinion of the 2004 PH Committee.</li> <li>ACOG (2006)</li> </ol>
Pelvic/Breast Exam	Annually for females Preventive breast cancer supplemental screening of one MRI or Ultrasound annually prescribed by physician as a result of dense tissue, etc. requiring a second procedure to get a clear picture are recommended. (HMK business decision for parity with PA Act 1 supplemental screening effective 1.1.2024). Note that breast MRI or ultrasound needed as a result of finding an abnormality is for diagnostic purposes and is not considered a preventive screening.	<ol> <li>ACOG (2006)</li> <li>HMK Business Decision 2023</li> </ol>
Regular Weight, Height and BMI percentile and BMI Monitoring	Annually Adults with a BMI of 25 to 39.9 (overweight or obese) would be allowed 4 preventive health office visits and unlimited nutritional counseling visits specifically for obesity per year and one (1) set of recommended laboratory studies (lipid profile, hemoglobin A1c, AST, ALT and fasting glucose.	<ol> <li>AAFP (1996) Updated 2003</li> <li>CDC (2004)</li> <li>USPSTF 2014</li> </ol>

. History and Physical	Description	References
Blood Pressure Screening	The USPSTF recommends screening for high blood pressure in adults aged 18 years or older with ambulatory blood pressure monitoring, or ABPM measurements outside of the clinical setting for diagnostic confirmation before starting treatment. A Recommendation	1. USPSTF (1996) Updated 2007, 2105
Depression Screening	The USPSTF recommends screening for depression in the general adult population, including pregnant and postpartum women (age 18 and older). Screening should be implemented with adequate systems in place to ensure accurate diagnosis, effective treatment, and appropriate follow-up. B Recommendation	<ol> <li>USPSTF (1996) Updated 2002, 2009, 2016</li> <li>Bright Futures (2014)</li> </ol>
	<ul> <li>Depression screening every year from ages 11 through 21 (Bright Futures). ).</li> <li>Different tests can be used for screenings (This list is not all-inclusive).</li> <li>PHQ-19</li> <li>PHQ-A</li> </ul>	
Mental Health	One mental health preventive office visit annually with a mental health provider with a master's level degree or higher any age per DE state law beginning 1.1.1024	DE State law 2024
Hearing Screening	Bright Futures recommends screening once between the ages of 18-21 years.	Bright Futures 2018

. History and Physical	Description	References
Lipid Panel	<ul> <li>Perform once between ages 17-21 for general population per Bright Futures</li> <li>Routine screening every five years beginning at age 20 and more frequent testing of those 20 years of age and older at risk for cardiovascular disease.</li> <li>The U.S. Preventive Services Task Force (USPSTF) recommends screening; men aged 35 and older for lipid disorders. A Recommendation; men aged 20 to 35 for lipid disorders if they are at increased risk for coronary heart disease. B Recommendation; and women aged 45 and older for lipid disorders if they are at increased risk for coronary heart disease. A Recommendation; and</li> </ul>	<ol> <li>USPSTF (1996) Updated 2004</li> <li>NCEP (2004)</li> <li>The expert consensus opinion of the 2004 PH Committee.</li> <li>Bright Futures 2018</li> </ol>
Mammography	<ul> <li>The USPSTF recommends biennial screening mammography for women aged 50 to 74 years. USPSTF – B Recommendation</li> <li>The PPACA has a provision that defers to the USPSTF 2002 guidelines on breast cancer screening which states that women ages 40-49 should routinely be screened for breast cancer. The 2002 Recommendation reads as follows: The U.S. Preventive Services Task Force (USPSTF) recommends screening mammography, with or without clinical breast examination (CBE), every 1-2 years for women aged 40 and older. USPSTF - B Recommendation.</li> <li>Pennsylvania state law mandates payment associated with a mammogram every year for women 40 years of age or older and with any mammogram based on physician's recommendations for women under 40 years of age. West Virginia syncs with Pennsylvania in this mandate. Even though most Highmark products pay for mammograms, some employer groups (such as employer groups outside of Pennsylvania) and/or plans administered by Highmark will not pay for part or all of the recommended Pennsylvania state mandated mammograms. Includes 3-D Mammograms (Digital Breast Tomosynthesis) ACS</li> <li>Yearly mammograms are recommended starting at age 40 and continuing for as</li> </ul>	<ol> <li>USPSTF (1996) Updated 2002, 2009, 2016</li> <li>ACS (1997) Updated 2006</li> <li>ACOG (2009)</li> <li>PA State Law 2015 3D Mammograms</li> </ol>

	long as a woman is in good health.	
Breast Ultrasound/Mri	Preventive breast cancer supplemental screening of one MRI or Ultrasound annually prescribed by physician as a result of dense tissue, etc. requiring a second procedure to get a clear picture are recommended.	1. HMK business decision for parity with PA Act 1 supplemental screening effective 1.1.2024.
	Note that breast MRI or ultrasound needed as a result of finding an abnormality is for diagnostic purposes and is not considered preventive screening.	2. HMK Business Decision 2023

. History and Physical	Description	References
Genetic Risk Assessment and BRCA Mutation Testing for Breast and Ovarian Cancer Susceptibility	<ul> <li>The USPSTF recommends that primary care clinicians assess women with a personal or family history of breast, ovarian, tubal, or peritoneal cancer or who have an ancestry associated with breast cancer susceptibility 1 and 2 (BRCA1/2) gene mutations with an appropriate brief familial risk assessment tool. Women with a positive result on the risk assessment tool should receive genetic counseling and, if indicated after counseling, genetic testing. B recommendation updated August 2019.</li> <li>Different tests can be used for screenings (This list is not all-inclusive).</li> <li>B-REST</li> <li>FHS-7</li> <li>Any one of the following indicates a risk of having a BRCA mutation:</li> <li>Personal and/or family history of breast cancer diagnosed under the age of 50.</li> <li>Personal and/or family history of ovarian cancer at any age.</li> <li>Women of Ashkenazi Jewish ancestry diagnosed with breast cancer or ovarian cancer at any age, regardless of family history.</li> <li>Personal and/or family history of male breast cancer.</li> <li>Affected relatives with a known BRCA1 or BRCA2 mutation.</li> <li>Bilateral breast cancer, especially if diagnosed at an early age.</li> <li>Breast cancer and ovarian cancer in the same person.</li> <li>Note: Recommend annual breast MRI screening as an adjunct to mammography</li> <li>BRCA mutation</li> </ul>	1. USPSTF (2005) (2014) 2019 2. AMA (2006) 3. ACS (2007)
Chemoprevention of Breast Cancer	The USPSTF recommends that clinicians offer to prescribe risk-reducing medications, such as tamoxifen, raloxifene, or aromatase inhibitors, to women who are at increased risk for breast cancer and at low risk for adverse medication effects. B recommendation updated September 2019.	USPSTF (2002) (2014) 2019
Fasting Plasma Glucose	The USPSTF recommends screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity. Clinicians should offer or refer patients with prediabetes to effective preventive interventions. B Recommendation. Already on the preventive schedule for adults with BMI for overweight or obesity. Expansion to include morbid obesity diagnosis codes.	1. USPSTF (2008) 2015, 2022

. History and Physical	Description		References
	Clinicians should offer or refer patients with abnormal blood glucose to intensive behavioral counseling interventions to promote a healthful diet and physical activity.		
Papanicolaou Test (Pap smear)	The USPSTF recommends screening for cervical cancer every 3 years with cervical cytology alone in women aged 21 to 29 years. For women aged 30 to 65 years, the USPSTF recommends screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (cotesting).USPSTF A Recommendation	2. 3.	ACOG (2003) Updated 2010, 2012 USPSTF Updated 2012
	The USPSTF recommends against screening for cervical cancer in women older than 65 years who have had adequate prior screening and are not otherwise at high risk for cervical cancer. D Recommendation		Care Mandate 2012 ACS American Cancer Society (2012) ASCCP American Society
	The USPSTF recommends against screening for cervical cancer in women younger than 21 years. D Recommendation	8.	for Colposcopy (2012) ASCPS American Society for Clinical Pathology (2012)
	The USPSTF recommends against screening for cervical cancer in women who have had a hysterectomy with removal of the cervix and do not have a history of a high-grade precancerous lesion (ie, cervical intraepithelial neoplasia [CIN] grade 2 or 3) or cervical cancer. D Recommendation	9.	
	ACOG/ACS/ASCCP/ASCPS all mirror USPSTF recommendations. Screen for cervical dysplasia beginning at 21 years (Bright Futures).		

Testing	Description		References
Chlamydia / Gonorrhea and other STD Screening	Risk assessments for <u>STIs</u> should continue at each visit between ages 11 and 21 (Bright Futures)	1.	USPSTF (1996) 2007, 2012, 2014, 2016, 2019, 2020, 2022
	<u>Chlamydia</u> : The USPSTF recommends screening for chlamydia in sexually active women age 24 years or younger and in older women who are at increased risk for infection. USPSTF – B Recommendation	2. 3.	CDC (2006), 2023 Bright Futures 2023
	Gonorrhea: The USPSTF recommends screening for gonorrhea in sexually active women age 24 years or younger and in older women who are at increased risk for infection.		

2024 Adult Preventive Health Guidelines

Testing	Description	References
	USPSTF – B Recommendation	
	<u>Syphilis</u>	
	Screen all patients at increased risk for syphilis. USPSTF – A Recommendation.	
	The USPSTF recommends screening for syphilis infection in persons who are at	
	increased risk for infection. A Recommendation.	
	The CDC recommends routine voluntary HIV screening for all persons 13-64	
	years old in health care settings not based on risk; however the USPSTF	
	concluded there is insufficient evidence to recommend either for or against routinely screening for HIV adolescents and adults who are not at an increased	
	risk for infection.	
	The USPSTF recommends that clinicians screen for HIV infection in adolescents and adults aged 15 to 65 years. Younger adolescents and older adults who are at	
	increased risk of infection should also be screened. A recommendation updated	
	June 2019.	
	The USPSTF recommends that clinicians screen for HIV infection in all pregnant	
	persons, including those who present in labor or at delivery whose HIV status is unknown. A recommendation updated June 2019.	
	Bright Futures expanded the age range for a one-time general population check	
	for HIV from 15-18 years to 15-21 years. 1.2023 Final Release	
	Hepatitis C:	
	The USPSTF recommends screening for hepatitis C virus (HCV) infection in adults	
	aged 18 to 79 years. B Recommendation. March 2020	
	Hepatitis B:	
	The USPSTF recommends screening for hepatitis B virus (HBV) infection in	
	persons at high risk for infection. B recommendation for non-pregnant	
	adolescents and adults	
	CDC MMWR updated recommendation for Hepatitis B screening from high-risk only to once per lifetime for adults and high risk more often.

STI Counseling		
	The USPSTF recommends intensive behavioral counseling for all sexually active adolescents and for adults who are at increased risk for sexually transmitted infections. B Recommendation	
PrEP HIV Prevention	The USPSTF recommends that clinicians offer preexposure prophylaxis (PrEP) with effective antiretroviral therapy to persons who are at high risk of HIV acquisition. A recommendation Released June 2019.	USPSTF 2019
Colorectal Cancer Screening	<ul> <li>The USPSTF recommends screening for colorectal cancer in all adults aged 50 to 75 years. A Recommendation. Reaffirmation of previous recommendation.</li> <li>The USPSTF recommends screening for colorectal cancer in adults aged 45 to 49 years. B Recommendation</li> <li>Regular screening for colorectal cancer with: <ul> <li>Colonoscopy every 10 years or,</li> <li>Fecal occult blood test home 3-pack FOBT test or FIT fecal immunochemical test every year or,</li> <li>Flexible sigmoidoscopy every 5 years or,</li> <li>Flexible sigmoidoscopy every 10 years with with FIT every year or</li> <li>CT Colonography every 5 years (Delaware state mandate also) or</li> <li>Cologuard (DNA stool screening) every three years</li> </ul> </li> <li>The federal government issued an FAQ detaining the mandated coverage for diagnostic colonoscopy following a positive result by another mandated screening method. The first dollar coverage of the diagnostic colonoscopy will apply per law beginning 6.1.2022 for PA, WV, and DE. The effective date for NY is based on NY state law and is 12.1.2021 with first migrated business for HMK.</li> <li>Eligible colonoscopies must be performed within one year of a claim for a mandated colon cancer screening test</li> </ul>	<ol> <li>AAFP (1996) Updated 2002</li> <li>USPSTF (1996) Updated 2002, 2008, 2016, 2021</li> <li>American Cancer Society (2004)</li> <li>ACOG (2007)</li> <li>PPACA 2022 FAQ</li> </ol>
Bone Mineral Density Screening	Postmenopausal women under 65 yr of age who have had a fracture or have one or more risk factors for osteoporosis. Recommended only once every two years. Bone mineral density studies for asymptomatic patients are considered screening. The USPSTF recommends screening for osteoporosis in women ages 65 and	<ol> <li>USPSTF (1996) Updated 2003 (2011)</li> <li>National Osteoporosis Foundation (1998) Updated 2009</li> </ol>

Testing	Description	References
	older and in younger women whose fracture risk is equal to or greater than that of a 65 year-old woman who has no additional risk factors. USPSTF – B Recommendation (2011)	
Prostate Cancer Screening	For men aged 55 to 69 years, the decision to undergo periodic prostate-specific antigen (PSA)–based screening for prostate cancer should be an individual one. Before deciding whether to be screened, men should have an opportunity to discuss the potential benefits and harms of screening with their clinician and to incorporate their values and preferences in the decision. C Recommendation. Only A and B recommendations are preventive benefits.	<ol> <li>AAFP (2002)</li> <li>USPSTF (1996) Updated 2004, 2012, 2018</li> <li>NEJM (2009)</li> </ol>
Lung Cancer Screening	The USPSTF recommends annual screening for lung cancer with low-dose computed tomography (LDCT) in adults aged 50 to 80 years who have a 20 pack- year (PPY) smoking history and currently smoke or have quit within the past 15 years. Screening should be discontinued once a person has not smoked for 15 years or develops a health problem that substantially limits life expectancy or the ability or willingness to have curative lung surgery. B Recommendation	1. USPSTF (2014), 2021
Behavioral Counseling for Prevention of CVD	The USPSTF recommends offering or referring adults who are overweight or obese and have additional cardiovascular disease (CVD) risk factors to intensive behavioral counseling interventions to promote a healthful diet and physical activity for CVD prevention. B Recommendation	USPSTF 2014
Statin Use	The USPSTF recommends that adults without a history of cardiovascular disease (CVD) (ie, symptomatic coronary artery disease or ischemic stroke) use a low- to moderate-dose statin for the prevention of CVD events and mortality when all of the following criteria are met: 1) they are aged 40 to 75 years; 2) they have 1 or more CVD risk factors (ie, dyslipidemia, diabetes, hypertension, or smoking); and 3) they have a calculated 10-year risk of a cardiovascular event of 10% or greater.	USPSTF 2016
	The USPSTF recommends that clinicians prescribe a statin for the primary prevention of CVD for adults aged 40-75 years who have 1 or more CVD risk factors (i.e., dyslipidemia, diabetes, hypertension, or smoking) and estimated 10-year risk of a cardiovascular event of 10% or greater. This is a B grade recommendation	USPSTF 2022
