## **2024** Prenatal/Perinatal Care Preventive Health Guidelines

Highmark is committed to promoting and providing quality prenatal/perinatal care in order to ensure the well being of the expectant mother and the unborn child. The following guidelines are to be used in the care of the maternity patient with the understanding that additional services should be rendered based on the special needs of the individual patient.

The Patient Protection and Affordable Care Act (PPACA, P.L. 111-148, March 23, 2010, as amended) requires, among other things, coverage of all A and B Recommendations as promulgated by the United States Preventive Services Task Force (USPSTF). Recommendations can be found at <a href="https://downloads.aap.org/AAP/PDF/periodicity-schedule.pdf">https://downloads.aap.org/AAP/PDF/periodicity-schedule.pdf</a>? ga=2.123517835.1012687934.1671222549-249991078.1667565696 and <a href="https://www.uspreventiveservicestaskforce.org/uspstf/recommendation-topics/uspstf-a-and-b-recommendations">https://www.uspreventiveservicestaskforce.org/uspstf/recommendation-topics/uspstf-a-and-b-recommendations</a>

2024 Prenatal/Perinatal Care Preventive Health Guidelines

| Initial Evaluation                                      | Up to Week 28 | 28 - 36 weeks | 36 + weeks |
|---|---------------|---------------|------------|
| Maternal age  |               |               |            |
| Vaginal bleeding  |               |               |            |
| Urinary infections                                      |               |               |            |
| Exposure to radiation and chemicals                     |               |               |            |
| Use of alcohol - USPSTF recommends screening            |               |               |            |
| and behavioral counseling interventions to              |               |               |            |
| reduce  |               |               |            |
| alcohol misuse by pregnant women at the time            |               |               |            |
| of  |               |               |            |
| the physical exam. USPSTF - B                           |               |               |            |
| Recommendation  |               |               |            |
| Pregnant women: The USPSTF recommends that              |               |               |            |
| clinicians ask all pregnant women about tobacco         |               |               |            |
| use, advise them to stop using tobacco, and             |               |               |            |
| provide behavioral interventions for cessation to       |               |               |            |
| pregnant women who use tobacco. A                       |               |               |            |
| Recommendation 2015                                     |               |               |            |
|   |               |               |            |
| Sexual history and discussion of HIV                    |               |               |            |
| Asthma  |               |               |            |
| - Medications   |               |               |            |
| - Herbs and supplements                                 |               |               |            |
| - Drug sensitivity                                      |               |               |            |
| - Allergies   |               |               |            |
| - Past surgeries  |               |               |            |
| - Blood transfusions                                    |               |               |            |
| - Diabetes and other metabolic diseases                 |               |               |            |
| - Vascular problems                                     |               |               |            |
| - Hypertension  |               |               |            |
| - Sexually transmitted diseases, including syphilis and |               |               |            |
| genital herpes  |               |               |            |
| - Convulsive disorders                                  |               |               |            |
| - Gynecologic abnormalities                             |               |               |            |
| - Serious injuries                                      |               |               |            |
| - Environmental and occupational exposures              |               |               |            |

2024 Prenatal/Perinatal Care Preventive Health Guidelines

| Initial Evaluation  | Up to Week 28 | 28 - 36 weeks | 36 + weeks |
|---|---------------|---------------|------------|
| - Immunity and immunization status, including<br>influenza immunization for the patient who will be<br>pregnant during the flu season. (CDC 2006)   |               |               |            |
| - Health-care personnel should administer a dose of<br>Tdap during each pregnancy irrespective of the<br>patient's prior history of receiving Tdap. (CDC 2012)  |               |               |            |
| -Discussion of domestic violence  |               |               |            |
| -Discussion of benefits of breastfeeding  |               |               |            |
| -Discussion of preventing CMV (cytomegalovirus)   |               |               |            |
| -Counseling for Dental and Periodontal Disease  |               |               |            |
| Note: Extra cleaning for pregnant members who have<br>Concordia (UCCI) coverage.  |               |               |            |
| The USPSTF recommends the use of low-dose aspirin<br>(81 mg/day) as preventive medication after 12 weeks<br>of gestation in women who are at high risk for<br>preeclampsia. B Recommendation  |               |               |            |
| The USPSTF recommends screening for depression in<br>the general adult population, including pregnant and<br>postpartum women. Screening should be implemented<br>with adequate systems in place to ensure accurate<br>diagnosis, effective treatment, and appropriate follow-<br>up. B Recommendation 2016 |               |               |            |
| Bright Futures – screening postpartum during<br>pediatrician visits – frequency per Bright Futures chart<br>2018  |               |               |            |
| The USPSTF recommends that clinicians provide or<br>refer pregnant and postpartum persons who are at<br>increased risk of perinatal depression to counseling<br>interventions. 2019 B Recommendation  |               |               |            |

| Initial Evaluation   | Up to Week 28 | 28 - 36 weeks | 36 + weeks |
|--|---------------|---------------|------------|
| The USPSTF recommends screening for preeclampsia in pregnant women with blood pressure (BP) measurements throughout pregnancy. B Recommendation 2017   |               |               |            |
| The USPSTF recommends that all women who are<br>planning or capable of pregnancy take a daily<br>supplement containing 0.4 to 0.8 mg (400 to 800 µg) of<br>folic acid. A Recommendation. 2017  |               |               |            |
| The USPSTF recommends that clinicians offer pregnant<br>persons effective behavioral counseling interventions<br>aimed at promoting healthy weight gain and<br>preventing excess gestational weight gain in<br>pregnancy. B Recommendation. May 2021 |               |               |            |

| Initial Evaluation  | Up to Week 28   | 28 - 36 weeks   | 36+ weeks  |
|---|---|---|--|
| <ul> <li>LAB TESTS</li> <li>The USPSTF recommends screening for gestational diabetes mellitus (GDM) in asymptomatic pregnant women after 24 weeks of gestation. B</li> <li>Recommendation (USPSTF 2014 Update)</li> <li>The USPSTF concludes that the current evidence is insufficient to asess the balance of benefits and harms of screening for iron deficiency anemia in pregnant women to prevent adverse maternal health and birth outcomes. I Recommendation (2015 update)</li> <li>The USPSTF recommends screening for asymptomatic bacteriuria using urine culture in pregnant persons. B</li> <li>Recommendation 2019 update</li> <li>Blood group</li> <li>Rh type - USPSTF strongly recommends Rh (D) blood typing and antibody testing for all pregnant women during their first visit for pregnancy-related care.</li> <li>USPSTF – A Recommendation</li> <li>USPSTF also recommends repeated Rh (D) antibody testing for all unsensitized Rh (D)-negative women at 24-28 weeks' gestation, unless the biological father is known to be Rh (D)-negative. USPSTF – B</li> <li>Recommendation</li> <li>Cervical cytology</li> <li>The USPSTF recommends screening for hepatitis B</li> <li>virus (HBV) infection in pregnant women at their first prenatal visit. A recommendation updated July 2019.</li> <li>Ultrasound at 16 - 20 weeks gestation, as indicated-</li> </ul> | <ul> <li>LAB TESTS</li> <li>Between weeks 24 - 28, patient should be tested for gestational diabetes as indicated.</li> <li>Urine dip stick for protein and glucose.</li> </ul> | LAB TESTS<br>Urine dipstick for protein and<br>glucose.<br>At week 28<br>Repeat antibody test if<br>unsensitized, RH negative, and<br>prophylactic Rho(D)<br>immunoglobulin should be given | <ul> <li>LAB TESTS</li> <li>Urine dipstick for protein<br/>and glucose.</li> <li>Group B Strep screen (35-37<br/>weeks)</li> <li>As indicated for high risk<br/>factors:<br/>Gonorrhea screen<br/>Chlamydia screen<br/>Repeat syphilis screen<br/>Repeat HIV screen</li> </ul> |

| Initial Evaluation                                      | Up to Week 28 | 28 - 36 weeks | 36+ weeks |
|---|---------------|---------------|-----------|
| -Chlamydia  |               |               |           |
| Routine screening for all pregnant women aged           |               |               |           |
| 24 and younger and for older pregnant women at          |               |               |           |
| risk. USPSTF - B Recommendation                         |               |               |           |
| -Gonorrhea if at high risk of infection. USPSTF – B     |               |               |           |
| Recommendation  |               |               |           |
| - The USPSTF recommends that clinicians screen for      |               |               |           |
| HIV infection in all pregnant persons, including those  |               |               |           |
| who present in labor or at delivery whose HIV status is |               |               |           |
| unknown. A recommendation updated June 2019.            |               |               |           |
| - Multiple Marker Screening                             |               |               |           |
| - Discussion of prenatal screening to determine         |               |               |           |
| anatomic and chromosomal abnormalities                  |               |               |           |
| -Offer Cystic Fibrosis screening                        |               |               |           |
| Additional lab tests and services to be                 |               |               |           |
| conducted based on history (This list is not all-       |               |               |           |
| inclusive )   |               |               |           |
| - Screening for diabetes "as indicated"                 |               |               |           |
| - Examination for sickle cell                           |               |               |           |
| - Skin test for tuberculosis                            |               |               |           |
| - Urine drug screen                                     |               |               |           |
| - Annual Influenza vaccine as indicated by the CDC      |               |               |           |

| Time of Delivery  | Post-partum  |
|---|--|
|   | Visit 4 - 6 weeks after delivery   |
| <ul> <li>LAB TESTS</li> <li>Hemoglobin and hematocrit, type and screen when indicated</li> <li>Urine drug screen, as indicated, at time of presentation for delivery to advise the pediatrician of positive results</li> <li>Syphilis screen at delivery, if no prenatal care</li> <li>Hepatitis B surface antigen screen, if no prenatal care</li> <li>Entire screen, if no prenatal care</li> </ul>         | <ul> <li>VISIT SHOULD INCLUDE:</li> <li>Interval history</li> <li>Physical Exam <ul> <li>Breasts</li> <li>Abdomen</li> <li>External and internal genitalia</li> <li>Discussion of Pap smear follow-up as indicated</li> </ul> </li> <li>Review of family planning/birth control methods.</li> </ul>  |
| <ul> <li>IMMUNIZATION</li> <li>Immunization against rubella (MMR), if indicated,-at time of discharge after delivery.</li> <li>Administration of Rho(D) immunoglobulin if indicated, at time of discharge after delivery.</li> <li>Varicella, at time of discharge after delivery, (only if there is no provider documented history of chickenpox or a negative antibody titre for past infection)</li> </ul> | <ul> <li>Screen for depression: Bright Futures – screening postpartum during pediatrician visits – frequency per Bright Futures chart 2018</li> <li>Screen for domestic violence</li> <li><i>IMMUNIZATION</i> Recommend Varicella (only if there is no provider documented history of chickenpox or a negative antibody titre for past infection) Hepatitis B, vaccines if indicated.</li> </ul> |
|   | Human papillomavirus vaccine, if appropriate, per FDA recommendations.   |
