Colorectal cancer

A screening could save your life.

HIGHMARK 

Because Life.™

As one of the top three leading causes of cancer-related deaths in the U.S., colorectal cancer is highly common. Fortunately, it's also highly preventable and there are steps you can take to help lower your risk.

Know your risk

Anyone can get colorectal cancer.

While some risks are inherited, others are avoidable.

You may be at higher risk if you:

- Have large growths in the colon or rectum, Crohn's disease, colitis, ovarian disease, or type 2 diabetes.
- Have a family history of colon, rectal, or other types of cancer.

You can reduce your risk by avoiding:

- Smoking cigarettes.
- Drinking three or more alcoholic drinks a day.
- Weight gain that results in having a BMI of 30 or greater.

Sources: USPSTF, ACS

Understand your screening options

Screenings can help detect precancerous changes before symptoms even start. If you're 45 or older — or have a family history of colorectal cancer or other high-risk factors — talk to your doctor about scheduling a screening. To help get you started, here's a quick guide to some common screenings:

COLONOSCOPY

Once sedated, your doctor will use a thin, flexible tube to examine your colon for polyps and abnormal tissue.

Recommended every 10 years.

FECAL OCCULT BLOOD TESTS (FOBT)

A sample of your stool will be tested for the presence of blood. *Recommended once a year.*

FLEXIBLE SIGMOIDOSCOPY

This screening is similar to a colonoscopy, but for the rectum. Once sedated, your doctor will insert a tube to look for any abnormalities. *Recommended every five years.*

CT COLONOGRAPHY (VIRTUAL COLONOSCOPY)

Your doctor will use X-rays and computer imaging to search for abnormal cells in your colon. *Recommended every five years.*

COLOGUARD® FIT DNA

A large sample of your stool will be tested for DNA changes. *Recommended every three years.*

Quick tip: Start with a colonoscopy

While everyone's plan is a little different, preventive colonoscopies are usually fully covered. However, if you opt for a different screening and have abnormal results, your doctor may order a colonoscopy. That's why it's a good idea to start with a colonoscopy as your first screening.

Don't forget to follow up

You may need follow-up tests if you have:

- Abnormal results on your screenings.
- Blood in your stool, a change in your bowel habits, or unexplained weight loss.

If cancer is diagnosed, you and your doctor will discuss a treatment plan based on the kind of cancer you have and if it has spread to other parts of the body.

We're here to help

If you're not sure which screenings are covered by your plan, call Member Service at the number on the back of your member ID card.
