Disclaimer

Highmark Wholecare℠ medical policy is intended to serve only as a general reference resource regarding coverage for the services described. This policy does not constitute medical advice and is not intended to govern or otherwise influence medical decisions.

Policy Statement

Highmark Wholecare℠ may provide coverage under the medical-surgical benefits of the Company's Medicaid products for medically necessary drug testing for the treatment of drug abuse (chemical dependency).

(Current applicable Pennsylvania HealthChoices Agreement Section V. Program Requirements, B. Prior Authorization of Services, 1. General Prior Authorization Requirements.)

Definitions

Presumptive (i.e., qualitative, immunoassay) tests - usually performed at the point of service (POS). Immunoassay tests are based on the principle of competitive binding and use antibodies to detect a particular drug or drug metabolite in a sample

Definitive (i.e., confirmatory, quantitative) tests - always performed in a laboratory and assess multiple drugs at one time. Individual tests are specific to one drug only. Definitive testing is a panel that includes individual drug tests and the associated levels of the specific drugs. Definitive drug testing is more cost effective than individual testing. Gas chromatography/mass spectrometry (GC/MS) is considered to be the gold standard for confirmatory testing

Procedures

1. Definitive (i.e., confirmatory, quantitative) drug testing may be considered medically necessary under ANY ONE of the following conditions:
    A. When performed as a reflex by a Clinical Laboratory Improvement Amendments (CLIA) certified laboratory after a positive presumptive test when ANY ONE of the following are met:
        1) To verify a presumptive positive urine drug test before reporting the presumptive finding to the ordering clinician and without an additional order from the clinician; OR
        2) In specific situations for which definitive testing is required for clinical decision making and would significantly change a treatment plan (i.e., to distinguish drug supplementation from products of minor metabolic pathways, to help identify individuals diverting medications); OR

3) To identify non-prescribed medication or illicit substance use so as to allow safe prescribing of controlled substances, where the clinician has documented concerns related to the safety risks that may arise due to failure to identify non-prescribed medications or illicit substances; OR

B. When presumptive drug tests are not available for the drug(s) for which there is a suspicion of abuse or misuse and ALL of the following conditions are met:
   1) The clinical presentation of the individual being tested supports the need for the specific drug testing being requests; AND
   2) Results of testing will impact treatment; AND
   3) Testing is performed in a CLIA certified laboratory.

Note: The collection date of the specimen must equal the date of service for the drugs tested.

2. Quantity Limitations
   - Presumptive drug testing, when billed in any combination, may be considered medically necessary and will only be allowed one (1) test per patient, per date of service regardless of the number of drug classes tested.
   - Definitive drug testing, when billed in any combination, may be considered medically necessary and will be allowed one (1) test per patient, per date of service.

3. When the drug testing services are not considered medically necessary:
   - Routine presumptive urine drug testing in substance use disorder treatment (i.e., testing at every visit or without consideration for specific individual risk factor(s) is considered not medically necessary
   - Definitive and presumptive drug testing not meeting the criteria indicated in this policy is considered not medically necessary.
   - Quantity of laboratory services that exceeds the frequency guidelines listed in this policy are considered not medically necessary.
   - Individual drug tests are considered not medically necessary.
   - The following drug tests are considered experimental/investigational, and therefore, not medically necessary because the safety and/or effectiveness of this service cannot be established by the available published peer-reviewed literature:
     - Hair drug testing
     - Oral fluid drug testing
     - Meconium drug testing

4. Post-payment Audit Statement
   The medical record must include documentation that reflects the medical necessity criteria and is subject to audit by Highmark Wholecare℠ at any time pursuant to the terms of your provider agreement.

5. Place of Service
   The proper place of service for drug testing is outpatient.

Governing Bodies Approval

CLIA
The presumptive and definitive drug tests are offered as laboratory-developed tests under Clinical Laboratory Improvement Amendments (CLIA) licensed laboratories. Clinical laboratories may develop and validate tests in-house and market them as a laboratory service; laboratories offering such tests as a clinical service must meet general regulatory standards of CLIA and must be licensed by CLIA for high complexity testing.

CMS
The Centers for Medicare and Medicaid Services (CMS) has published the following guidance:

- Local Coverage Determination (LCD) Controlled Substance Monitoring and Drugs of Abuse Testing (L35006)
- Local Coverage Article (LCA) Billing and Coding: Controlled Substance Monitoring and Drugs of Abuse Testing (A56645)

Summary of Literature

Urine drug testing is considered an essential component of monitoring patients who are receiving long-term opioid therapy, it has also been suggested for patients receiving long-term benzodiazepine or stimulant therapy. The purpose of urine drug testing is to monitor compliance with prescribed therapy and detect the use of nonprescribed and illicit substances, especially heroin and nonprescribed opioids and benzodiazepines, all of which can increase the risk of a fatal overdose. A positive urine drug test result has significant implications for a patient's pain treatment plan, as well as his or her personal and professional life. Many controlled substance treatment agreements specify that pain medications will be tapered off or stopped if a test result is positive (AFP, 2019).

According to the American Academy of Pain Medicine (AAPM) and the American Association for Clinical Chemistry (AACC), urine drug testing (UDT) is recommended before the initiation of treatment with opioids and during therapy. Their recommendations include obtaining a UDT before initiating opioid therapy trial and randomly at follow-up visits to confirm the appropriate use of opioids. It is critical that a valid specimen is obtained and enough substances evaluated to determine appropriate adherence with the treatment regimen. The testing must also be able to identify polysubstance use, abuse, addiction, and possible diversion before the patient (or recipient of diverted medications) experiences a significant adverse event. Lastly, it is also important to note that studies continue to demonstrate that the administered dosage does not necessarily correlate with the concentration of the drug in an individual's urine (AACC/AAPM, 2018).

Presumptive Testing
Presumptive tests generally have lower sensitivity and/or specificity compared to definitive tests. The primary benefit of presumptive testing methods is a much faster turnaround time to receive results, which allows for a more rapid therapeutic response that can more meaningfully link substance use and behavior. Therefore, presumptive tests should be used when it is a priority to have more immediate (although potentially less accurate) results. If a patient disputes the results of a presumptive test, the test should be confirmed using a definitive method. If a patient confirms that he or she used a substance detected by a presumptive test, it is not necessary to perform a definitive test to confirm the result. Presumptive testing

should be a routine part of initial and ongoing assessment of a patient's use of substances. If a provider expects the result of a presumptive test to be positive (eg, a patient reports recent use), and information regarding specific substance and/or quantity is desired, it may be appropriate to skip the presumptive test in favor of a definitive test (ASAM, 2017).

Point-of-care (POC) (oral/urine) qualitative presumptive immunoassays offer similar performance characteristics to laboratory-based immunoassays and can detect some over-the-counter medications, prescribed and nonprescribed drugs, and illicit substances in pain management patients. However, physicians using POC testing must reference the POC package insert and/or consult laboratory personnel to accurately determine the assay's capabilities (especially amphetamine, benzodiazepine, and opiate immunoassays) and understand the limitations for detecting specific medications within a drug class to prevent incorrect assumptions or interpretation and to determine when additional testing is necessary (AACC/AAPM, 2018).

Definitive Testing
Definitive testing should be used whenever a patient disputes the findings of a presumptive test, when a provider wants to detect a specific substance not adequately identified by presumptive methods (e.g., heroin rather than opiates) or when the results will inform a decision with major clinical or non-clinical implications for the patient (e.g., treatment transition, changes in medication therapies, changes in legal status) (ASAM, 2017).

Qualitative definitive tests should be used over immunoassays since they are more effective at identifying relevant over-the-counter medications, prescribed and non-prescribed drugs, and illicit substances in pain management patients (AACC/AAPM, 2018).

Definitive Urine Drug Testing

HCPCS Code	Description
G0480	Drug test(s), definitive, utilizing (1) drug identification methods able to identify individual drugs and distinguish between structural isomers (but not necessarily stereoisomers), including, but not limited to, GC/MS (any type, single or tandem) and LC/MS (any type, single or tandem and excluding immunoassays (e.g., IA, EIA, ELISA, EMIT, FPIA) and enzymatic methods (e.g., alcohol dehydrogenase)), (2) stable isotope or other universally recognized internal standards in all samples (e.g., to control for matrix effects, interferences and variations in signal strength), and (3) method or drug-specific calibration and matrix-matched quality control material (e.g., to control for instrument variations and mass spectral drift); qualitative or quantitative, all sources, includes specimen validity testing, per day; 1-7 drug class(es), including metabolite(s) if performed
G0481	Drug test(s), definitive, utilizing (1) drug identification methods able to identify individual drugs and distinguish between structural isomers (but not necessarily stereoisomers), including, but not limited to, GC/MS (any type, single or tandem) and LC/MS (any type, single or tandem and excluding immunoassays (e.g., IA, EIA, ELISA, EMIT, FPIA) and enzymatic methods (e.g., alcohol dehydrogenase)), (2) stable isotope or other universally recognized internal standards in all samples (e.g., to control for matrix effects, interferences and variations in signal strength), and (3) method or drug-specific calibration and matrix-matched quality control material (e.g., to control for instrument variations and mass spectral drift); qualitative or quantitative, all sources, includes specimen validity testing, per day; 8-14 drug class(es), including metabolite(s) if performed
G0482	Drug test(s), definitive, utilizing (1) drug identification methods able to identify individual drugs and distinguish between structural isomers (but not necessarily stereoisomers), including, but not limited to, GC/MS (any type, single or tandem) and LC/MS (any type, single or tandem and excluding immunoassays (e.g., IA, EIA, ELISA, EMIT, FPIA) and enzymatic methods (e.g., alcohol dehydrogenase)), (2) stable isotope or other universally recognized internal standards in all samples (e.g., to control for matrix effects, interferences and variations in signal strength), and (3) method or drug-specific calibration and matrix-matched quality control material (e.g., to control for instrument variations and mass spectral drift); qualitative or quantitative, all sources, includes specimen validity testing, per day; 15-21 drug class(es), including metabolite(s) if performed
G0483	Drug test(s), definitive, utilizing (1) drug identification methods able to identify individual drugs and distinguish between structural isomers (but not necessarily stereoisomers), including, but not limited to, GC/MS (any type, single or tandem) and LC/MS (any type, single or tandem and excluding immunoassays (e.g., IA, EIA, ELISA, EMIT, FPIA) and enzymatic methods (e.g., alcohol dehydrogenase)), (2) stable isotope or other universally recognized internal standards in all samples (e.g., to control for matrix effects, interferences and variations in signal strength), and (3) method or drug-specific calibration and matrix-matched quality control material (e.g., to control for instrument variations and mass spectral drift); qualitative or quantitative, all sources, includes specimen validity testing, per day; 22 or more drug class(es), including metabolite(s) if performed
