## U.S. Antibiotic Awareness Week & World Antimicrobial Resistance Awareness Week

U.S. Antibiotic Awareness Week (USAAW) and World Antimicrobial Resistance Week will occur **November 18–24** this year. USAAW involves collaboration with the Centers for Disease Control and Prevention (CDC), state-based programs, and nonprofit and for-profit partners to educate providers on the best ways to:

- Improve the safe use of antibiotic and antifungal medications
- Increase awareness about antimicrobial resistance (AR) and how it poses a global threat
- Communicate effectively with patients about the appropriate use of antibiotics

Improving how healthcare professionals prescribe these medications can help patients avoid adverse events, fight antimicrobial resistance, and ensure these life-saving drugs will be available for future generations<sup>1</sup>.

Below are strategies to consider regarding the use of antibiotics by patients:

- Avoid prescribing antibiotics for certain illnesses, such as acute bronchitis without pneumonia, when there is no comorbidity of chronic obstructive pulmonary disease (COPD), pulmonary fibrosis, or other chronic lung disease.
- Inform patients of the potential side effects and adverse events related to antibiotic use, even when such antibiotics are necessary and appropriate.
- When antibiotics are prescribed, emphasize to patients the importance of taking them as directed and completing the prescription.

Antibiotic prescribing is a complex issue, but simple changes can potentially create a significant impact. For more information on antibiotic stewardship, see the resources below:
